                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The DNA is that of a mammalian gene (open reading frame) encoding chymosin. The gene was placed in operable linkage with the al-3 promoter (see AAT03005). The al-3 gene controls the production of geranyl geranyl pyrophosphatase (GGPP) synthetase. GGPP is a precurso for carotenoids and xanthophylls. It has been shown that exposure to light increases the transcription level of GGPP synthetase 15-45 fold. Light activates a number of genes in the common bread mould, Neurospor This can be used to regulate the expression of genes encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1029

                                                                                                         Also claimed is E.coli JM83/pLC7 (ATCC 39325) which is transformed with pLC7 contg. the prorennin derived sequence fused in phase with B-galactosidase. The pLC7 prorennin expression plasmid includes sequences which code for both the pseudorennin and mature rennin cleavage sites between AAs 28-29 and AAs 42-43, respectively.

GAL1 promoter linked to gene - useful for direction of expression of the gene in yeast ce The recombinant material carrying a GAL1 promoter of the yeast ce galactokinase gene may be used in expressing a desired protein, e bovine growth hormone, interferon, prorennin or preprorennin, in yeast cell. Strains of Saccharomyces cerevisiae producing the polypeptides are produced. Yeast strains deposited as ATCC 20643, 20661, 20662 and 20663, strain designations CGY 196, 457, 461 and 528, resp. are new.

It was used as heterologous peptide/protein together with parts of the alpha-Sl-casein gene in the prodn. of DNA constructs. The heterologous peptide or protein may also be human insulin-like growth factor I. The constructs provide high yields of the protein with simple recovery from the milk. Activation of the gene occurs only in the mammary gland. See also AAQ14050, AAQ14774-77.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rnis is the nucleotide sequence of a Hindiii fragment containing the oleosin-spacer-Met-prochymosin sequence. This Hindiii fragment was joined to a nopaline synthase terminator and cloned into binary vector pcGNN1559. The resulting plasmid was called pSBSCTPTNT and introduced into A.tumefaciens. The resulting bacterial strain was used to transf B.napus plants
                                                                                                                                                                                                                                                                                                                                           association with the oil body fraction.

Allows production of commercially important proteins on a superior to production by conventional systems. The expressed heterologous protein can be easily separated from host cell components due to the use of the oil body as a carrier protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Expression of a useful for the

Any portion of the nucleotide sequence as described in ANA40055 can be used. Also claimed is a vector derived from plasmid pBR322. Typically plasmid pCR501 is obtd. from pOCT 2. The transcriptional direction of pCCT 3 is opposite to that of pCCT 2; it is clockwise in pCCT 2 (5' to 3') whereas counter

314 286 1810
double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pTT3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Patima Bonaldo. RNA was kindly provided by Dr. Minoru Ko (Wayne State University)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              further details.

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], CDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 5.0 and subtraction Rot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Shibata,K., Itoh,M., Aizawa,K., Nagaoka,S., Sasaki,N., Carninci,P., Konno,H., Akiyama,J., Nishi,K., Kitsunai,T., Tashiro,H., Itoh,M., Suni,N., Ishii,Y., Nakamura,S., Hazama,M., Nishine,T., Harada,A., Yamamoto,R., Matsumoto,H., Sakaguchi,S., Ikegami,T., Kashiwagi,K., Fujiwake,S., Inoue,K., Togawa,Y., Izawa,M., Ohara,E., Watahiki,M., Yoneda,Y., Ishikawa,T., Ozawa,K., Tanaka,T., Matsuura,S., Kawai,J., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y., Sikikawa,T., Ozawa,K., Sayashizaki,Y., Sikikawa,T., Ozawa,K., Tanaka,T., Matsuura,S., Kawai,J., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y., Sikikawa,T., Ozawa,K., Sayashizaki,Y., Sikikawa,T., Ozawa,K., Tanaka,T., Matsuura,S., Kawai,J., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y., Sikikawa,T., Ozawa,K., Sayashizaki,Y., Sikikawa,T., Ozawa,K., Tanaka,T., Matsuura,S., Kawai,J., Okazaki,Y., Muramatsu,M., Inoue,Y., Kira,A. and Hayashizaki,Y., Muramatsu,M., Inoue,Y., Kira,A., Muramatsu,M., Muramatsu,M., Inoue,Y., Kira,A., Muramatsu,M., Mu

further details.

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5 GAGAGAGAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3 ], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 5.0 and subtraction Rot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission
